Does your child have tics?

Tics are involuntary movements or sounds. For example, blinking, throat clearing, or shoulder shrugging. Tics are very common.

A research study seeks participants!

The purpose of this study to learn what causes tics and how they change over time.

Who may qualify?
1) Children between 5-12 years old with parent/guardian participation
2) Tics started less than 6 months ago

This study includes:
- 3 visits over 12 months
- MRI scans*
- Questionnaires and interviews
- Up to $310 for time and effort
